

SUBALO is a small human powered aquatic vehicle, easy to use, funny, environment friendly, for beach, **water sports** and snorkelling.

By using **SUBALO**, you can go **faster than swimming**, with equivalent effort.

No need for lessons. You can immediately sit down on it, put your feet on the pedals and start pedalling. You can then very simply use your hands to steer or the inclination of your body.

SUBALO allows you to perform “aquatic strolls”, to cruise alongside a coral reef, a coast, and admire the flora and fauna of the aquatic world. All this without any risk, as **SUBALO** brings you about 25 kg of floatability, allowing your chest to be out of the water.

The practice of **SUBALO** results in a natural “aqua-gym”, with a massage and relaxing effect of the water on your body, as well as fitness. It brings you wellness, contact with nature and a soft and pleasant approach of the aquatic world: sea, lake, river.

The propeller is located in a nozzle therefore there is very low risk for swimmers in the surroundings. Kids can easily enjoy **SUBALO** from 6 years old, if they know to swim and under constant adult supervision.

Features

Length from 1,65 to 1,89 meters, easily adjustable by hand with a pin at 3 positions.

Height: 0,66 meters

Width: 0,56 meters

Weight: 14 kg

SUBALO is delivered, in 2 parts which fit in each other, in a plastic wrap of L = 1,32 W = 0,54 H = 0,68 m.

Total weight packed is 17 kg. It comes with “How to use”, maintenance and repair instructions.

To mount it: just fit the seat float in the rear part.

Maintenance is limited: Rinse it with fresh water regularly during intensive use periods. After each season, you should completely rinse it, and inject marine grease in the mechanical box once a year.

A part-list is available on demand.
